

# ATI STREAM COMPUTING SAMPLE

## Mersenne Twister Random Number Generator

### 1 Overview

1.1 Location `$(ATISTREAMSDKSAMPLESROOT)\samples\opencl\cl\app`

1.2 How to Run See the *Getting Started* guide for how to build samples. You first must compile the sample.

Use the command line to change to the directory where the executable is located. The pre-compiled sample executable is at `$(ATISTREAMSDKSAMPLESROOT)\samples\opencl\bin\x86\` for 32-bit builds, and `$(ATISTREAMSDKSAMPLESROOT)\samples\opencl\bin\x86_64\` for 64-bit builds.

Type the following command(s).

1. `MersenneTwister`  
Runs with default options;  $x = 4096$ ,  $y = 2$ .
2. `MersenneTwister -h`  
This prints the help file.

1.3 Command Line Options Table 1 lists, and briefly describes, the command line options.

**Table 1 Command Line Options**

Short Form	Long Form	Description
-h	--help	Shows all command options and their respective meaning.
-q	--quiet	Quiet mode. Suppresses all text output.
-v	--verbose	Verbose output.
-t	--timing	Print timing.
-x	--numRands	Number of random numbers to be generated.
-y	--factor	Each seed generates "factor" random numbers.
	--device	Devices on which the program is to be run. Acceptable values are <code>cpu</code> or <code>gpu</code> .

### 2 Implementation Details

This SIMD-oriented Fast Mersenne Twister (SFMT) generates random numbers and a Box-Muller used to convert the random numbers to Gaussian random numbers. See reference [1] for more details on the SMFT algorithm. See reference [2] for details about the Box-Muller Transformation.

Each work-item calculates the "factor" Gaussian random numbers from a given seed.
